# Brief

Senior Computer Science student with experience in web scraping and full-stack development. Designed and built a web scraping pipeline from scratch, handling data extraction, processing, and storage for millions of records. Strong foundation in TypeScript, React, and database design. Seeking a software engineering role focused on automation, frontend, or full-stack development.

## **EDUCATION**

University of Oklahoma	
------------------------	--

Bachelor of Science, Computer Science

## Work Experience

#### Web Scraping and Automation Specialist

University of Oklahoma

- Built a web scraping pipeline from scratch, automating data extraction of over ten million posts and profiles.
- Optimized data extraction using Python's asyncio API, maximizing resource utilization within proxy and account constraints, achieving 40x throughput.
- Implemented caching and request filtering, reducing bandwidth per registration from 50MB to 2.7MB (94% reduction).
- Designed and optimized a relational database to track scraping progress, manage account-feed mappings, and execute complex queries for efficiently distributing workloads across 2,000+ accounts and millions of records.
- Used pytest to validate assumptions while reverse-engineering an undocumented API, ensuring scraping logic handled responses correctly.

## Skills

- Programming Languages & Tools: Python, TypeScript, JavaScript, SQL
- Front-End Development: React, HTML, CSS, Next.js
- Back-End & Databases: PostgreSQL, API Development, Server-Side Rendering (SSR)
- Automation & DevOps: Web Scraping, Browser Automation, Git, Unit Testing (pytest), Docker

# Certificates

- The Joy of React Josh Comeau (2023)
- CSS for JavaScript Developers Josh Comeau (2023)

# Personal Projects

#### konekt.gg

React Next.js PostgreSQL Amazon S3

A social media app for users to match and meet online friends.

- Utilized Next.js for fast server-side rendering, measuring page performance using Lighthouse.
- Provided a high quality user experience for both mobile and desktop environments.
- Designed and implemented database schemas, optimized queries, and developed API endpoints.
